

SPECIFICATION AMENDMENTS

Please amend paragraphs 0018 and 0022 of the substitute specification as follows.

[0018] Sensibly, the included angle $\underline{A_I}$ of the bore bottom 3 is greater than the corresponding flank angle $\underline{A_F}$ of the nozzle seat 4, thereby ensuring a good contact of the nozzle seat 4 against the bore bottom 3.

[0022] As already mentioned, the exchangeable nozzle 2 is held in the installed state in the bore 1 by means of an external holding screw 5. The holding screw 5 surrounds the exchangeable nozzle on the outside and end side and is screwed to the wall of the bore ~~[[2]]~~ 1 of the nozzle carrier 6.
